SANGAMESH DEVANI

Bengaluru, India | sangameshdevani16@gmail.com | +91 76192 03151 | LinkedIn | GitHub

SUMMARY

Final-year Computer Science student with a full-stack technical core spanning Java/Spring Boot and React/Next.js, backed by hands-on internship experience and independently shipped, production-deployed projects. Practical experience across relational databases, REST APIs, and AI/LLM integration (Gemini API, text-to-SQL, AI-assisted development with Cursor and Claude), and cloud deployment. Strong foundation in core CS fundamentals — data structures & algorithms, OOP, DBMS, operating systems, and computer networks — with a demonstrated ability to independently design, build, deploy, and debug complete software systems end-to-end.

EDUCATION

Dayananda Sagar University, Bengaluru 2023 – 2027
B.Tech, Computer Science and Engineering — GPA: 8.2/10

SGN PU College, Kalaburgi 2021 – 2023
Class XII (PCMB) — 94.16%

EXPERIENCE

Infosys Virtual Internship 7.0 — Software Development Intern Jun 2026 – Aug 2026
Organizational Knowledge Gap Intelligence Platform (OKGIP)
GitHub Repo

- Built the AI-driven Skill-Gap Recommendation Engine, Mentorship/Expert Directory, Knowledge Article Library, and Skill Assessment/Reviews modules on a Spring Boot 3.3 / Java 17 / React 18 enterprise platform.
- Implemented JWT-based authentication and role-based access control (RBAC) across 6 distinct user roles; integrated the Gemini API to power intelligent recommendations.
- Collaborated using Git, submitting pull requests to feature branches following standard SDLC and code-review practices.

PROJECTS

UFDR-INTEL — AI-Powered Digital Forensics Platform
FastAPI, SQLite FTS5, React 19/Vite, Gemini API

- Built a text-to-SQL natural language query agent and a RAG-based chat interface for AI-assisted analysis over forensic case data.
- Implemented indexed full-text search (SQLite FTS5) and deployed the full stack (Render backend, Vercel frontend), independently resolving CORS and dependency-conflict issues.

GitHub Repo | Live Deployment

Smart Route Optimizer — Hackathon Project (Top 25 of 100s)
Next.js, TypeScript, PostgreSQL, Redis, Google Maps API

- Built a route optimization engine using Google Maps APIs with algorithmic path-selection logic.
- Designed a normalized PostgreSQL schema and Redis caching layer to reduce redundant computation and improve retrieval latency.

GitHub Repo | Live Deployment

TECHNICAL SKILLS

Languages: Java, C, JavaScript, HTML, CSS
Core CS: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks, Complexity Analysis, SDLC
Frameworks: Spring Boot, React, Next.js, FastAPI
Databases: MySQL, PostgreSQL, JDBC, SQLite (FTS5)
AI/LLM: Gemini API, Text-to-SQL Agents, Cursor, Claude
Tools & Cloud: Git, REST APIs, JWT/RBAC, AWS Academy (Cloud Foundations), Render, Vercel, Chart.js, Leaflet.js, Google Maps API

CERTIFICATIONS

- Skill Up in Java Programming — Infosys Springboard
- Artificial Intelligence Fundamentals — IBM
- AWS Academy Graduate — Cloud Foundations
